I'm happy to announce that the presentation that I delivered to the [Online ColdFusion Meetup](#) last Thursday night, entitled *Building an Object Oriented Model*, was recorded and is therefore [available to anyone who is interested](#) and wasn't able to attend in person. Don't be put off by the fact that the recording is 90 minutes long - the presentation is only 60 minutes, and is followed by a 30 minute Q and A session.

A few people asked about the sample code that I presented. It can be [downloaded directly from this post](#).

Also note that I have written a number of posts on these topics, so anyone looking for more information can check out the [OO Design category](#) of this blog.

I'd like to thank everyone for attending and for all of the wonderful feedback, and I'd also like to thank [Charlie Arehart](#) for allowing me to speak and for continuing to operate this amazing resource.

Finally, I will be presenting my other cf.Objective() presentation, *An Object Oriented Approach to Validations* at an Online ColdFusion Meetup session in the near future, date and time TBA.
