

A Cool jQuery Plugin - FastConfirm

I was working on the [Engage app](#) for [cf.Objective\(\)](#) and I wanted to quickly add a confirmation dialog to the *delete* link for proposals. Now I'm not a particularly advanced jQuery developer, but I do know that there are a lot of people out there who are, and many of them have written plugins to help us lazier folks get things done. Through the power of Google I found a [jQuery Plugins Page](#) that lists all plugins that have been tagged with the term *confirm*. Wanting something quick and easy, I was drawn to one called *Fast Confirm*.

I checked out the [demo](#) and read through the [docs](#), then saw some comments on the bottom of the docs page that suggested precisely how to implement the plugin for my exact use case. Within 10 minutes I had my confirmation dialog up and running! Here's the code:

```
<link type="text/css" href="/css/jquery.fastconfirm.css" rel="stylesheet" />

<script type="text/javascript" src="/js/jquery.fastconfirm.js"></script>

<script type="text/javascript">

$(function() {

    $(".confirm").click(function() {

        $(this).fastConfirm({

            position: "right",

            onProceed: function(trigger) {

                window.location.href=$(trigger).attr("href");

            },

            onCancel: function(trigger) {

            }

        });

        return false;

    });

});

</script>
```

With the above script on my page, all I have to do is add a class of *confirm* to any anchor tag and I'll get a confirmation dialog whenever the anchor is clicked.

The plugin does allow you to change the question asked in the dialog, as well as a number of other options, but I was happy to accept the default of "Are you sure?". I think this is a great, simple plugin. Kudos to [Pierre-Jean Parra](#) for writing it and contributing it to the community.
